EM5052

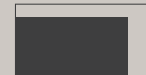

Evoking the rocky appearance of the precious metal deposits characteristic of this area, where one of the most important mines in South America is located, these metallic patterns arise with colors and textures of unique beauty and singularity. **Nazca collection** patterns are combined with new finishes that are sure to be the future of the stone industry.

Improved with:
Nano Enhancement of Surfaces

A new high-performance stain and substance repellent technology. Invisible to the naked eye, it has been formulated to resist staining and keep surfaces clean, guarding from everyday wear and tear with minimal maintenance. NEOS makes Enigma Surfaces the most durable product in the industry.

Cement structure, with a base in which different greys are fused, flooded by tenuous dark traces, which take greater prominence in their lighter areas.

A surface that pretends with great success to have seen the passing of time, but which in turn is postulated as an ideal material to bring modernity to the spaces where it is applied.

All a jewel that escapes the canons established so far.
